

Quality Policy

We will strive to provide excellent semiconductor manufacturing services for worldwide customers and establish mutually beneficial, long-term partnership.

We will spread dedication to quality to every facet of the company and achieve a culture of continuous improvement to assure customer satisfaction. There is only one ultimate goal: Zero defect – in everything we do.

We will adopt expedient containment programs to shield our customers from any defects until each has been eliminated. We all share the responsibilities to achieve this goal.

A handwritten signature in black ink, appearing to read 'Mark Liu', written over a horizontal line.
