

TSMC Environmental Policy

Since its establishment in 1987, TSMC has not only strived for the highest achievements in its core business of dedicated IC foundry services, but has also actively developed positive relationships with all stakeholders, including employees, shareholders / investors, customers, suppliers / contractors, and society to fulfill its responsibility as a corporate citizen and pursue a sustainable future.

Vision

To promote environment sustainability and to be a world-class company in environmental protection management as well as conservation of energy and other resources conservation

Mission

- Establish environmental management system, formulate objectives and targets for continuous improvement of environmental protection, continue promoting green fab, green manufacturing, and green supply chain, manage environmental risks, and march toward net-zero emissions
- Pursuing the highest consumption efficiency of energy, water, and other resources, actively engaging in waste reduction and pollution prevention, and preserving biodiversity
- Communicating and collaborating with stakeholders to reduce environmental impact of product life cycle including R&D, raw material, transportation and logistics, production, packaging, and products and services

Guiding Principles

- Meeting or surpassing international regulations and standards governing environmental protection as well as efficiency and consumption of energy and other resources
- Staying abreast of global climate change trends, evaluating risks and opportunities, and investing resources to effectively manage energy saving and water conservation
- Adopting environmentally-friendly actions, enhancing performance of energy and resource consumption, waste management, circular economy, pollution control and biodiversity, as well as proactively collaborating with customers and suppliers / contractors to build up a green supply chain for the semiconductor industry from design and manufacturing to products and services
- Enhancing awareness and sense of accountability towards environmental protection and climate change for all employees, subsidiaries, joint ventures and suppliers / contractors
- Sharing expertise and experience, and collaborating with business partner, industry, government, academia, and all of society to address the challenges of environmental protection and climate change
- Environmental protection-related risk assessment shall be deemed as a key element of due diligence prior to forming a subsidiary or engaging in mergers and acquisitions
