

# TSMC Environmental Policy

Since its establishment in 1987, TSMC has not only strived for the highest achievements in its core business of dedicated IC foundry services, but has also actively developed positive relationships with all stakeholders, including employees, shareholders, customers, subsidiaries, joint ventures, suppliers, outsourcing contractors, and society to fulfill its responsibility as a corporate citizen and pursue a sustainable future.

## Vision

To promote environment sustainability and to be a world-class company in environmental protection management as well as energy and other resources conservation

## Mission

- Continue promoting green fab, green manufacturing, green supply chain and managing environmental risks
- Pursuing the highest consumption efficiency of energy, water, and other resources, and actively engaging in waste reduction and pollution prevention
- Communicating and collaborating with stakeholders to reduce environmental impact of product life cycle

## Guiding Principles

- Meeting or surpassing international regulations and standards governing environmental protection as well as efficiency and consumption of energy and other resources
- Staying abreast of global climate change trends, evaluating risks and opportunities, and investing resources to effectively manage energy saving and water conservation
- Adopting environmentally-friendly actions, enhancing performance of energy and resource consumption, waste management and pollution control, as well as proactively collaborating with customers, suppliers, and outsourcing contractors to build up a green supply chain for the semiconductor industry from design, manufacturing to products and services
- Enhancing awareness and sense of accountability towards environmental protection and climate change for all employees, subsidiaries, and joint ventures
- Sharing expertise and experience, and collaborating with business partner, industry, government, academia, and all of society to address the challenges of environmental protection and climate change
