

VERIFICATION OPINION OF GREENHOUSE GAS STATEMENT

Opinion No.:
00015-2023-GHG-RGC

Date of issue:
24 March 2023

Page 1 of 2

This is to verify initiate reporting of Greenhouse Gas Emissions Inventory Report (2022) of

TSMC Nanjing Company Limited

Scope of Verification

DNV Business Assurance (DNV) has been commissioned by TSMC Nanjing Company Limited (hereafter the "Company") to perform a verification of the GHG Emissions Inventory Report (2022) (hereafter the "Inventory Report") in China, with respect to the emissions related to the site located at: 16 Zifeng Road, Pukou Economic Development Zone, Nanjing, Jiangsu, China.

Verification Criteria and GHG Programme

The verification was performed on the basis of,

- ISO 14064-1:2018 Specification with guidance at the organization level for quantification and reporting of greenhouse gas emissions and removals

as well as those given to provide for consistent GHG emission identification, calculation, monitoring and reporting.

Verification Opinion

It is DNV's opinion that the Inventory Report (2022), which was published in February 2023, is free from material discrepancies in accordance with the verification criteria identified as stated above. The opinion is decided based on the following approaches,

- For the Direct GHG emissions and Indirect GHG emissions from imported energy, the reliability of the information within the Inventory Report (2022) were verified with reasonable level of assurance.
- For the Indirect GHG emissions from products used by the Company, the involved information was verified and tested using agreed-upon procedures (AUP) as defined in Inventory Report.

Supplement to Statement

Process and Methodology

The reviews of the Inventory Report and the subsequent follow-up interviews have provided DNV with sufficient evidence to determine the fulfilment of stated criteria.

Quantification of Greenhouse Gas Emission

The Inventory Report covering the period 1st Jan. to 31th Dec. 2022, it is DNV's opinion that the Inventory Report results in quantification of GHG emissions that are real, transparent and measurable.

Organizational Boundary of Verification

Financial Management Control Operational Management Control Equity Share

GHGs Verified

CO₂ CH₄ N₂O HFCs PFCs SF₆ NF₃

GHG Inventory Categories	Amount ¹ (tCO ₂ e)
Category 1 - Direct GHG emissions	46,209.23
Category 2 - Indirect GHG emissions from imported energy ²	525,589.53
Category 4 - Indirect GHG emissions from products used by the Company ³	276,751.65

- The Global Warming Potential (GWP) defined in IPCC AR5 has been chosen and referred by the Organization.
- The electricity consumption related indirect emissions from imported energy were calculated by the emission factor which was announced by Ministry of Ecology and Environment.
- The indirect GHG emissions from products used by the company are counted by the upstream emissions (cradle-to-gate) from purchased goods and the upstream emissions of purchased energy (cradle-to-gate, During this reporting period, the company has implemented following mitigation activities: incl. diesel, natural gas and electricity).

During this reporting period, the company has implemented following mitigation activities:

- In February 2023, the company has applied and retired 663,540 MWH i-RECs under International REC Standard (equivalent to its electricity consumption in 2022);
- On 17 March 2023, the company has purchased and retired the equivalent 46,210 ton CO₂e (equivalent to its Direct GHG emissions in 2022) of VCU (Verified Carbon Unit) generated by "Hechu Afforestation Project in Anhui Province" (VCS ID 1855) under Verra Registry.
